<sup>◆</sup> Indicates an objective identified in *Healthy Arizona 2010*.

<sup>&</sup>lt;sup>a</sup>Objective 5-5 of *Healthy People 2010* uses as the numerator the number of deaths due to diabetes reported as the underlying or multiple cause of death. The multiple cause of death data are not available for out-of-State deaths of Arizona residents, therefore the diabetes-related death rates for Arizona are understated.

<sup>&</sup>lt;sup>b</sup> These rates are based on fewer than 10 deaths and are not statistically reliable.

<sup>&</sup>lt;sup>c</sup>Source: Arizona Department of Health Services, Bureau of Epidemiology and Disease Control, Office of HIV/STD Services, HIV Surveillance Section.

Note: Mortality rates for asthma are per 1,000,000 population. All other mortality rates are per 100,000 persons. Mortality rates for diabetes, coronary heart disease, stroke chronic lower respiratory disease, HIV disease, cirrhosis and drug-induced deaths are age-adjusted to the 2000 U.S. standard. The baseline year for the U.S. is 1997.
